Group: Heat Treatable Alloys . GENERAL DESCRIPTION: ALLOY 7075. 7075 is an aluminum alloy with zinc as the primary alloying element. It is strong, with a strength comparable to many steels, and has good fatigue strength and average machinability, but has less resistance to corrosion than many other Al alloys.

About Alloy 15-5. Alloy 15-5 was designed to have high strength with superior toughness than 17-4 PH. Alloy 15-5 is martensitic in structure in the annealed condition (ferrite free) and is further strengthened by a relatively low temperature heat treatment which precipitates a copper containing phase in the alloy.
